

SQL Developer

Angus Systems is the leading provider of mobile and cloud based work order and operations management solutions for commercial real estate teams. We help our clients shine.

Our success as a company isn't possible without our talented team. As a result, we're committed to a work environment where each team member feels challenged, respected and valued.

The Professional Services team is responsible for helping our clients go further with their data in Angus AnyWhere by offering the following services: data migrations, data conversions, data import/export routines, email parsing, and single sign-on integrations.

We are looking for a **SQL Developer** to join our team! The successful candidate has broad exposure to a variety of technologies/concepts and is driven to deliver database solutions for our client's complex requirements.

What you'll get to do:

- Design, test and implement one-time and regularly run data conversion routines for the import of client data from competitor application databases
- Develop ongoing import and export routines to interface the Angus AnyWhere system with other applications
- Collaborate with the Data Specialists and Customer Success Managers to identify conversion requirements and define project timelines
- Assist in the development of an import tool for the direct import of data from standardized templates
- Increase efficiency of conversion tools to expedite deployment onto playground environments and production servers
- Support and document best practices, processes, and standards for improving the data conversion process
- Gain in depth knowledge of the Angus AnyWhere data structures, Angus AnyWhere suite of applications, and client usage of applications

Who you are:

- Bachelor degree in Computer Science/Information Systems or equivalent specialized training/certification
- 5+ years of experience performing data conversions/ETL, data manipulations or database support, preferably within a SaaS company
- Solid knowledge of Microsoft SQL Server is required
- Proficient in database modeling, T-SQL, scripting, querying, stored procedures, and SSIS packages
- Good understanding on the role of databases in a web application stack

- Experience in developing migration solutions within SQL Server, SSRS, ETL tools, Power BI, data conversions, data deduplication, and data cleansing
- Familiar with other database systems (MariaDB), IDEs (VSCode), Git (GitHub), PHP, HTML, CSS, JavaScript/jQuery, Python, API, Docker, AWS, Excel, SharePoint, or SFTP
- Excellent time management skills to prioritize multiple projects in order to meet project deadlines
- Excellent analytical and problem-solving skills to anticipate any database issues and consider different approaches to troubleshoot
- Excellent communication skills (verbal, written, and interpersonal) to engage with both technical and non-technical teams

What we offer:

- An opportunity to work in a stable and exciting work environment with growth opportunities
- Tuition reimbursement program
- Medical and dental benefits without a waiting period
- Three (3) weeks paid vacation
- Location! We are in Don Mills with free parking, close to the 401 and DVP, with bike racks, and a TTC stop outside our office
- Defined Benefit Pension Plan
- Employee Assistance Program
- Various perks such, gym membership, fitbit for monthly team challenges, Perkopolis and socials for everyone from book club to sports
- A culture that encourages volunteering, giving back, team activities, and teamwork
- An open concept, bright office with access to Wilket Creek and Sunnybrook Park

To apply, please send your resume to jobs@angus-systems.com. Please refer to the job title in the subject line of your e-mail. We thank all applicants for your interest; however only selected candidates will be contacted.

Angus Systems is an equal opportunity employer, and is committed to building a diverse workforce representative of the communities we serve. We encourage all qualified candidates to apply. No recruiters please.
